

"Imbalance of environment leading to destruction of society."

Happy morning to everyone present over here.

Friends, let me ask you some questions. How many of you have cell phones? The answer is almost all. My next question is how many times do you check it? The answer is many times. Now ask yourself have I ever planted any sapling? Have I ever taken care of any plant or the trees present to your nearby places and surrounding? Forget about doing so. Have you ever thought about doing such things? I know answer is negative.

Friends, we are taking nature for granted which will definitely lead us towards destruction. Cutting trees and building skyscrapers has become fashion and ongoing trend for us, to which we say 'Development'.

We are so careless about our environment. We are continuously neglecting the threat of nature. If it is going to happen for some years continuously, our future is in dark definitely.

Deforestation is creating imbalance in our environment. Friends, do ask your parents that how many sparrows used to be there around ~~to~~ our houses some 10-15 years ago. You will

get answer so many. But now what has happened to them? Where are they now? Mobile towers helped a lot in their extinction.

Pollution is the another major factor which is helping in extinction of many species of birds. If we are so careless about the environment, the day of our destruction is so near. If we are taking it lightly, will face the adverse effect surely.

Friends, I hope from today, you will surely take care of our environment. My today's speech would have really motivated you and hope you have understood the importance of the conservation of environment.

Thank You!
